	Urgent	**Not Urgent**
Important	Do (Your MVP) - Terminal based - Creating flashcard objects with term and answer, a “starred” boolean - Flashcard mode, which does not show whether its right or wrong. Does not affect confidence level. Can be filtered to only use starred flashcards - Write mode, where the term or answer can be written to get correct. Can be changed to be case-sensitive or not.	Schedule - Construct flashcard objects with a “confidence” level - Learn mode, similar to Quizlet and Knowt, changes the “confidence” level. If the user gets the question wrong, the user can correct it to say they got it right. - Test mode, which randomizes the flashcards to make multiple choice, written, or true/false. User will choose which question to answer when the test is made, along with a “done” button to finish - “Chain” mode, original gamemode where you try to get as many questions correct as possible, sets a static high score.
Not Important	Delegate (Use a library) - Import ObjectInput/OutputStream and FileInput/OutputStream for saving and importing flashcards externally - ArrayList to save flashcard objects in session - Import Scanner for flashcard input in session	Delete (Cut it) - A GUI for the whole program - Match mode, works with the GUI so you can choose which flashcard goes with which, timed. - GUI to import and export flashcard sets
